

Supporting System for Therapeutic Antibody Discovery Programs

Dedicated Project Management

- One designated PhD-level project manager for each project
- Project design and coordination with production team
- Frequent and regular project updates
- Risk monitoring and problem solving for each project
- Direct communication with clients from initial inquiries to final deliverables

Strict IP Protection & Data Security

IP Protection

- **Controls over all communications:**
 - **User identification** and **verification**
 - Monitoring and security for hardware
 - Real-time monitoring **all activities and file transfers**
 - Security settings for web access and communication (firewall and anti-virus software in place)
- Regular internal **auditing**, suspicious activities are subject to investigation and legal liability
- Regular **trainings** and **tests** on work ethics and data security

Data Security

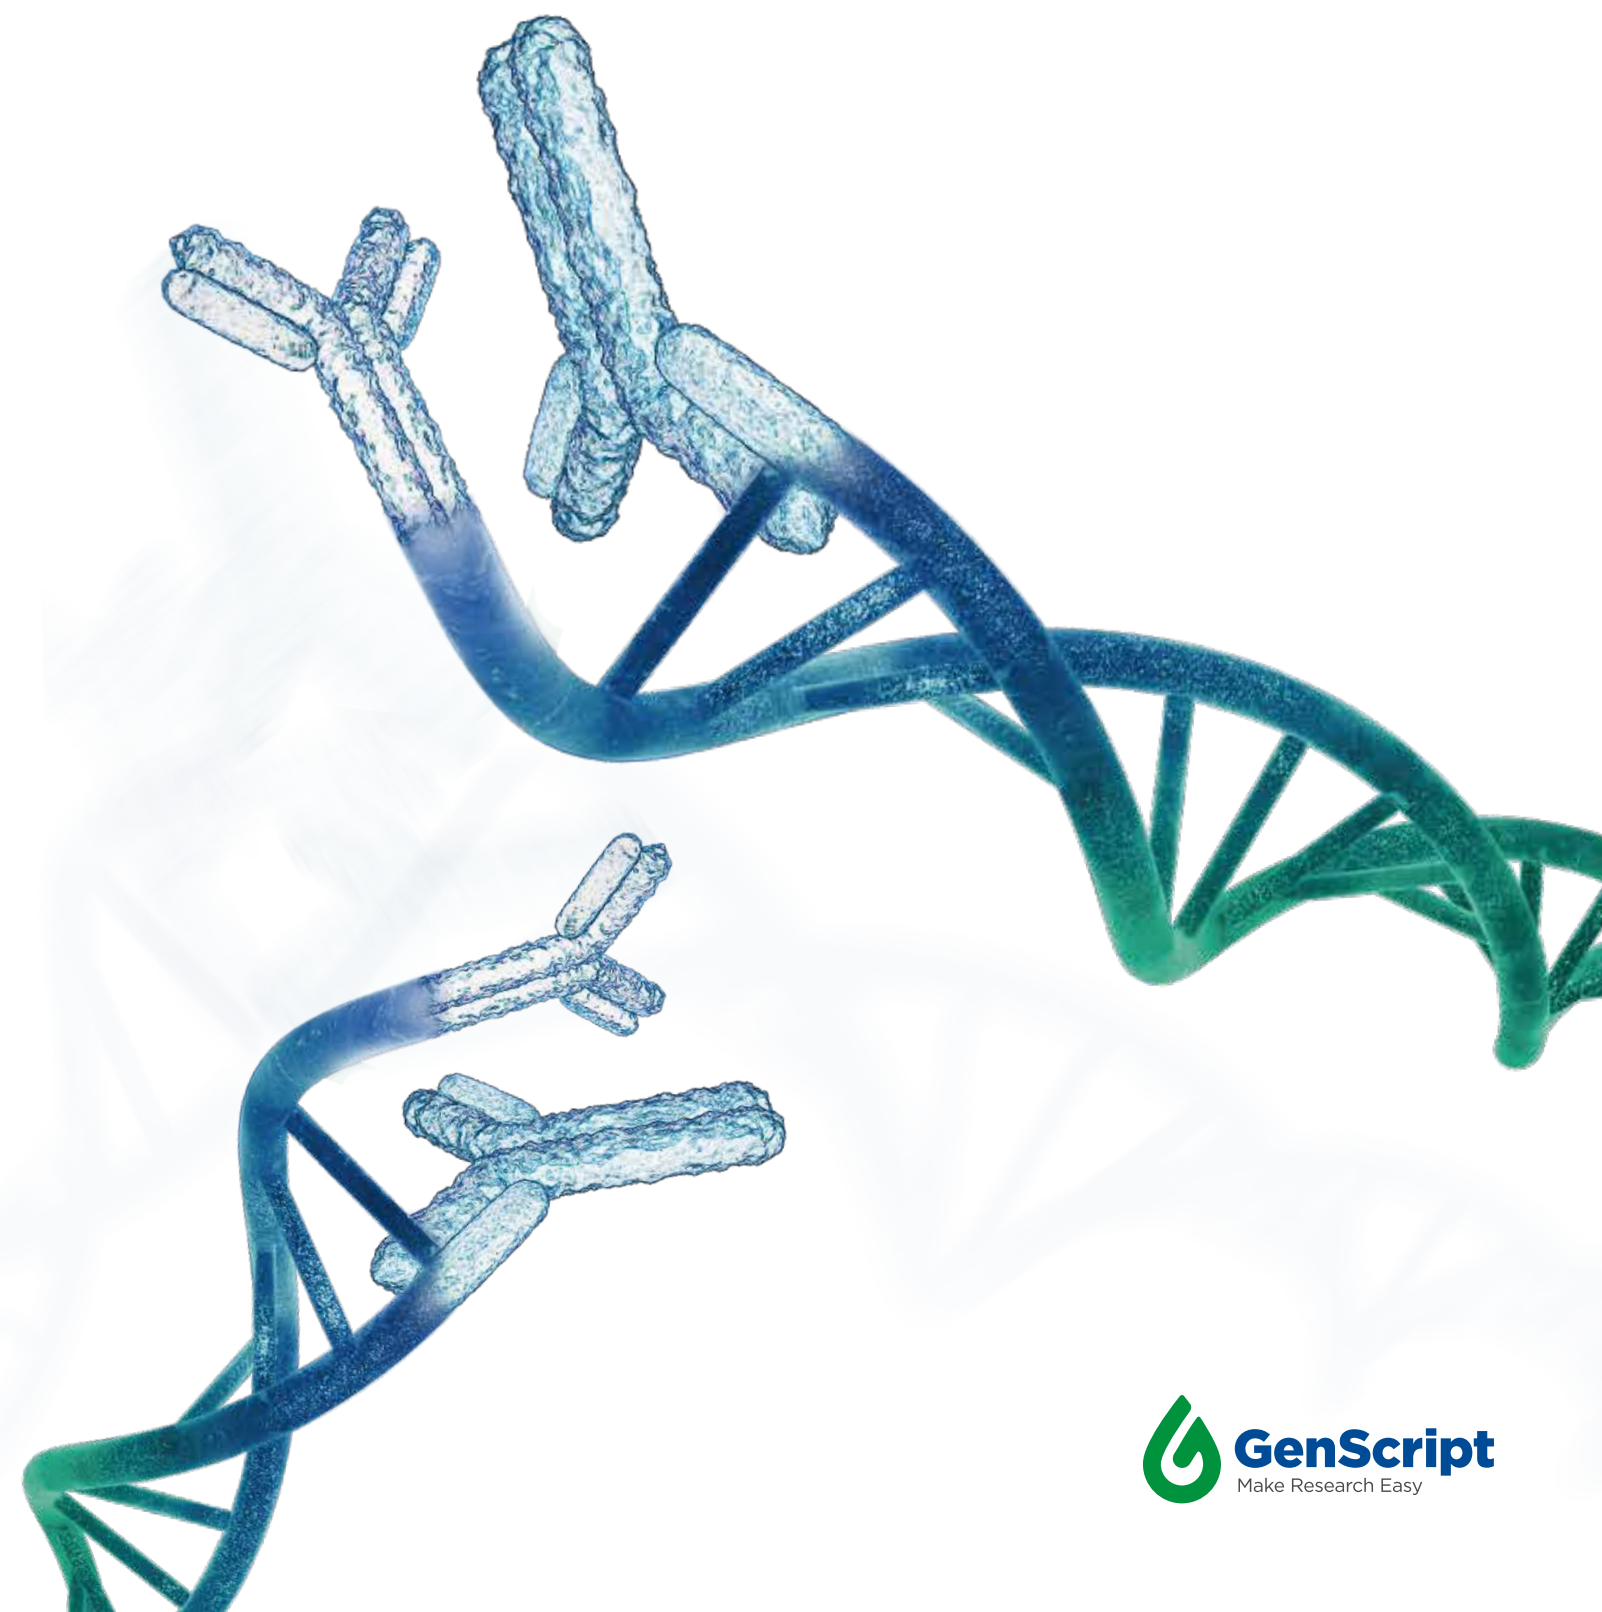

- **Controlled** access to labs and **CCTV monitors** for key areas
- Separate and internal LAN for the lab only, **no external access**
- Comprehensive **SOP** on data reporting
- **Regulatory-compliant**, Lab information management system
- Controlled data access according to security levels
 - **Top-Secret**: Sequence data and project report can be accessed only by 1-2 project managers
 - **Confidential**: Data generated for each milestone is only available within each group

Accelerated & Innovative

Therapeutic Antibody Discovery Services

From Target to IND

Accelerate Therapeutic Antibody Discovery with Integration & Innovation

Experience

- Murine hybridoma technology & Human naïve library technology
- >400 therapeutic antibody discovery projects delivered
- Successful cases in IND

Expertise in Transmembrane Target

- Single transmembrane targets, such as immune checkpoints
- Multiple transmembrane targets, such as GPCR

Acceleration

Industrial Standards

- Delivered Functional Humanized/Human Antibody Lead with Good Developability

Power of Integration

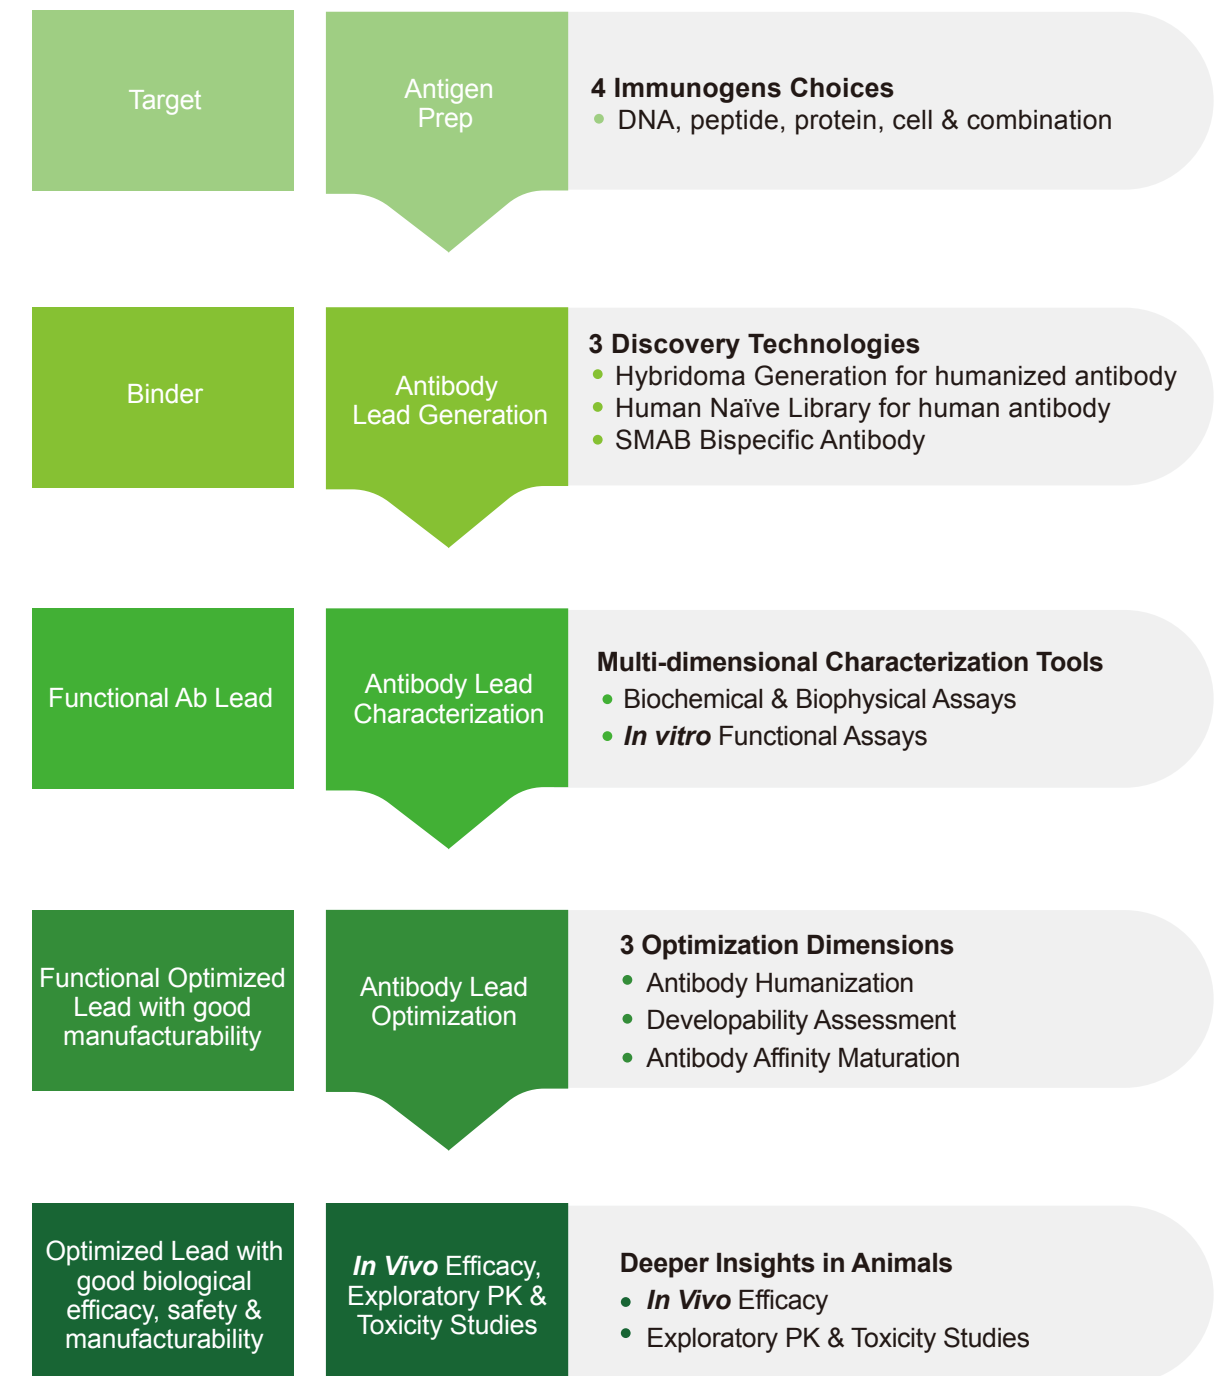

- All-in-one supplier
- Save at least **5 months** for antibody discovery program

Innovation

Proprietary SMAB bispecific antibody

- Unique bispecific antibody platform provided by CRO
- Generate novel MOA and meet unmet medical needs

What are “Blockbuster” Standards?

In the past 10 years, GenScript is always sticking to the standards of “blockbuster” to manage, research and deliver every therapeutic programs.

GenScript delivers humanized/human/ bispecific antibody leads **with good biological efficacy, safety & manufacturability**, as your one-stop solution **from Targets to Therapeutic Antibody Candidates**.
